

OZONIZER FOR A/C CIRCUITS

CLEANING IS MAINTENANCE

A simple and economical way to sanitize car A/C systems

Over time, the A/C circuits of vehicles can be subjected to the formation of bacteria, molds and other deposits that cause unpleasant odors, humidity and other problems. **IGENOX3** produces ozone and introduces it into the circuit, **drastically reducing bacteria, mold and other microorganisms**, eliminating odors and preventing reformation for a long time. Ozone is produced inside the device only by electricity, so no refill of any kind is required.

Compliant to ISO ed EMAS and recognized as safe gas "GRASS" by U.S. Food and Drug Administration (FDA - Department of Health and Human Services - Title 21, Part 173 - June 26, 2001 on "Use of ozone in gaseous and aqueous phases as an antimicrobial agent on food, including meat and poultry"). Ozone is considered a NATURAL AID to decontaminate surfaces and environments from bacteria, viruses, spores, molds, fungi, and is also used for removal of acarus, insects, spiders, cockroaches, mice, etc., as well as for removal of bad odours (Ministero della Sanità, Dipartimento Alimentare e Nutrizione Veterinaria, Protocollo n. 24482 del 31/07/1996).
